

PRESS RELEASE

**RELATECH: INNOVATIVE ADVANCED TRACEABILITY SYSTEM
FOR THE MONITORING OF THE AGRI-FOOD CHAIN AT THE
SERVICE OF CONSUMERS, *SISTABENE* PROJECT, DEVELOPED
BY ITHEA OF THE RELATECH GROUP IN COLLABORATION WITH
UNIVERSITIES AND RESEARCH CENTERS AND WITH *TORRE DI
MEZZO* GROUP, PRESENTED AT THE EVENT *NOTTE DEI
RICERCATORI 2020 "SuperScienceMe - Research is your
REvolution"***

Milan, 27th November 2020

Relatech S.p.A., *Digital Enabler Solution Knowledge (D.E.S.K.) Company* and innovative SME listed on AIM Italia market (Ticker: RLT), announces that, its subsidiary **lthea s.r.l.** and the researchers of its **R&D Innovation Labs** will be guests of the event **Notte dei Ricercatori** (translated in *Researchers' Night*) which will take place today, 27 November 2020.

"SuperScienceMe - research is your R-Evolution", an initiative funded by the EU, will take place this year in Calabria and Basilicata in a completely digital way, through an online platform that will allow you to virtually visit laboratories and museums, to participate in thematic meetings and to attend scientific demonstrations.

Experts from the research world of the University of Catanzaro, an integral part of the Relatech Group's scientific ecosystem, will participate in the challenging launched for the researchers' night in which they will present the research project **SISTABENE: Advanced Traceability System for Food Good**. **SISTABENE**, was born from joining the ***POR Calabria Fesr-Fse research and development project - 2014-2020*** the future is a daily job, to which Relatech joined, as a technological partner together with the leader Torre di Mezzo.

The **SISTABENE** project, developed by lthea s.r.l. of the Relatech Group, has been applied to the concrete case of the **Torre di Mezzo Group**, and is able to guarantee maximum traceability of fresh milk in compliance with the production criteria of the cold chain and fruit and vegetable production. The system stores, records and manages a large amount of data

relating to nutritional values and aspects of product production, including photos and videos of the company's daily life. The processes of the production chain of the Torre di Mezzo farm are monitored in all their phases: from feeding the cows, milking, packaging, biological analysis of milk, up to the distribution chain, which has recently been strengthened thanks to an important partnership.

The goal of the project is, therefore, to propose, on the agri-food market, an IT system that performs the traceability procedure by automatically intertwining the production data with the related product in order to ensure greater safety for the consumer. The final consumer can check the data relating to the production batch of the purchased product simply by scanning the QR-Code on the label: illustrations of the organoleptic properties, origin of the product, production process and further specific data.

Relatech, expert in **Digital Enabler Technologies**, is working on further integrating the current developments of SISTABENE within its **digital** and **Cloud based platform RePlatform**. In this way, it will be possible to carry out an advanced analysis of data based on Artificial Intelligence algorithms, the automatic detection of measurements in the field thanks to devices connected in **Internet of Things** mode and last but not least the enhancement of the product tracking functions along the entire the supply chain, in certified mode thanks to the use of the **Blockchain**. Through the introduction of these new digital technologies by Relatech and the domain experience developed by Torre di Mezzo as part of the experimentation, we believe that the evolution of SISTABENE can bring a concrete value of innovation even higher within the Agrifood market. In fact, the solution brings benefits both in terms of marketing and in terms of process control and productivity of companies thanks to a back office managed on a **Cloud** platform.

Pasquale Lambardi, Relatech President, comments: *"Our research and development hubs, as well as the solid scientific partnership with universities and research centers, represent for Relatech a fundamental asset for the growth of the entire Group, driven by the sole driver of digital innovation. . Relatech constantly invests in research and development, about 21% of revenues (2019), and we are convinced that to innovate we must start from research, to then industrialize the solutions on the market responding to the real needs of customers. We are very happy that our R&D experts have the opportunity to present the SISTABENE project at such a significant event as The Researchers' Night, in which scientific research is valued."*

You can participate by registering on [La Notte dei Ricercatori - Superscienceme](#) platform and follow the live broadcast on the [website](#) and on the [Facebook page](#) of the event.
